

Nagarjun Reddy Dudipala

Memphis, TN, USA | +1 901-462-6649 | email | linkedin | github.com

Professional Summary

Sr. Full Stack Java Developer with 7+ years of experience building high-availability systems in **healthcare insurance** and **banking**. Architect and deliver cloud-native microservices, event-driven backends, and React/Angular frontends using Java/Spring Boot, Kafka, and modern JavaScript. Known for improving API performance by up to 80%, supporting millions of transactions daily, and accelerating delivery with GCP (GKE), Azure, Docker, Kubernetes, Prometheus, Grafana, Splunk, and CI/CD automation.

Technical Skills

Programming: Java 8/11/17, JavaScript (ES6+), TypeScript, Python, SQL

Java Frameworks: Spring, Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Microservices, Kafka, JDBC, JPA, Hibernate

Web/Services: RESTful APIs, SOAP, JSON, XML, Swagger/OpenAPI, JWT, GraphQL (concepts)

Frontend: React, Angular, HTML5, CSS3, Bootstrap, jQuery, AJAX

Databases: PostgreSQL/PostGIS, SQL Server, Oracle, MySQL, MongoDB

Cloud: GCP (GKE, GCE, Cloud Storage), Azure (Functions, SQL DB, Blob, App Service), AWS (EC2, S3, Lambda, DynamoDB, API Gateway)

DevOps/Containers: Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, GitLab CI, Argo CD, JFrog Artifactory, Ansible, Tomcat

Monitoring/Logging: Prometheus, Grafana, ELK-style logging, Splunk, Kiali

Testing/QA: JUnit, TestNG, Selenium, Mockito, Postman

Tools/Collaboration: Git, Bitbucket, SVN, JIRA, IBM RTC, Confluence, IntelliJ IDEA, VS Code, Maven, Gradle, GitHub Copilot

Edge / API Gateway: Apigee, Akamai, F5 BIG-IP

Professional Experience

Aetna, a CVS Health Company

Hartford County, CT | Remote

Sr. Full Stack Java Developer (Contract)

July 2025 – Present

- Developed Spring Boot microservices secured with Spring Security and JWT for real-time **healthcare insurance** enrollment, improving API response time by 75% and supporting 1M+ requests across member and policy workflows.
- Architected Kafka/Confluent event streams between microservices and mainframe backends, handling 5M+ eligibility and claims events per day with 99.99% availability and near-zero message loss.
- Implemented IBM MQ-based messaging for legacy integration paths, ensuring reliable, transactional delivery of policy and billing updates to mainframe systems.
- Built React-based operational dashboards that let business users track insurance transactions, enrollment status, and error trends in real time, increasing self-service resolution and reducing support tickets by 25%.
- Integrated enterprise SSO by configuring Ping Identity and OAuth2/OIDC flows, enabling seamless login across internal portals and improving user adoption and security compliance.
- Authored Swagger/OpenAPI documentation for all major services and maintained Postman collections for regression and contract testing, reducing onboarding time for new consumers by 30%.
- Secured external APIs via Apigee and F5/Akamai edge policies (WAF, rate limiting, IP allowlists), cutting abusive traffic and improving external partner reliability.
- Created Grafana and Splunk-backed observability views for 50+ KPIs, cutting incident triage time by 30% and improving visibility into cross-service dependencies through Kiali.
- Implemented CI/CD with GitHub Actions, JFrog, and Argo CD on Dockerized services running in GKE, increasing deployment frequency from monthly to several times per week without SLA violations.
- Used GitHub Copilot and code-quality checks in IntelliJ to speed up boilerplate development while keeping coverage and style guidelines enforced across the codebase.
- Collaborated with architects, product owners, and QA in Agile/Scrum, consistently exceeding 90% sprint commitment and delivering high-quality increments into production.

University of Memphis

Memphis, TN

Frontend Developer / Research Assistant

Sep 2023 – May 2024

- Built React SPAs that consume ArcGIS and REST APIs, allowing research teams to stand up new map-based analytics views in hours instead of days for infrastructure and environmental data.
- Automated Python/SQL ETL pipelines into PostgreSQL/PostGIS, increasing data-processing efficiency by 85% and turning manual updates into scheduled, monitored jobs.
- Tuned SQL queries and introduced spatial indexes and API payload optimizations, reducing dashboard load and query times by 20%.

- Standardized reusable UI components and documented patterns in Confluence, reducing onboarding time for new research assistants by 40%.

Citi Bank

Hyderabad, Telangana, India | Hybrid

Full Stack Developer (Contract)

Aug 2021 – Aug 2023

- Developed Java 8/Spring MVC and Spring Boot services for digital **banking** features (account management, funds transfer, statements), improving transaction success rates and supporting hundreds of thousands of daily users.
- Improved SQL Server performance by 20% through Hibernate/JPA tuning, execution plan analysis, and targeted indexing on high-volume account and transaction tables.
- Built Angular and jQuery frontends that orchestrated SOAP/REST integrations, increasing completion rates for bill-pay and transfer flows and reducing abandonment on multi-step forms.
- Implemented React-based dashboards for internal operations teams to track customer transactions, fraud-risk flags, and reconciliation metrics, enabling faster investigation and reducing resolution times.
- Integrated MongoDB for unstructured and audit data, reducing retrieval time for investigations by 15% and simplifying schema evolution for new log attributes.
- Used Azure Functions, SQL DB, Blob, and App Service to lift key components to the cloud, shrinking lead time for environment provisioning and improving elasticity during peak usage.
- Created Swagger-based API documentation and standards for internal services, improving cross-team reuse and cutting duplicate endpoint implementations.
- Built CI pipelines with Jenkins, Maven, TestNG, Selenium, and Postman test suites, cutting regression defects in UAT by 30% release over release.
- Leveraged Bitbucket for source control, code reviews, and branching strategies, improving collaboration across distributed teams and reducing integration issues.

Elvance Health

Hyderabad, Telangana, India | On-site

Full-stack Developer (Contract)

May 2019 – Aug 2021

- Designed and implemented Java/Spring REST APIs for the Relevance Health platform, contributing to a 15% increase in user satisfaction and supporting a growing clinical and member user base.
- Applied OOP, design patterns, and layered architecture practices to backend services, lowering defect density and easing future feature enhancements.
- Built HTML5/CSS3/JavaScript frontends with responsive layouts and accessibility updates, reducing UI-related support tickets and improving internal adoption metrics.
- Implemented MySQL schemas and tuned queries, improving data retrieval performance for core workflows and reducing database-related incidents. Automated build and deployment using Maven, Ansible, and Tomcat across environments, shrinking deployment windows and reducing manual release errors.
- Monitored application health with Grafana and related metrics tooling, reducing unplanned downtime by 10% and enabling proactive performance tuning.

Selected Projects

Healthcare Provider Mapping Portal

Personal / Academic

- Built a provider-network portal using React, Node.js/Express, PostgreSQL/PostGIS, and ArcGIS Online to visualize providers, members, and access-to-care gaps for thousands of network records.
- Implemented drive-time and proximity analysis with PostGIS and ArcGIS Network Analyst, highlighting underserved regions and supporting data-driven network expansion.

Automated Geospatial Analytics Platform

University of Memphis

- Created Python/SQL ETL pipelines and ArcGIS dashboards for large urban and infrastructure datasets, replacing manual GIS workflows with nightly scheduled jobs and automated QA checks.
- Enabled non-technical users to run ad-hoc spatial queries and view results via web maps and charts, increasing platform adoption across multiple research groups.

Multithreaded Data Visualization Tool

Academic / Personal

- Built a multithreaded Java/JavaFX application for interactive analysis of 1M+ row datasets, improving load and processing times by 30%.
- Added configurable charting, filtering, and layout persistence, allowing analysts to save and share reusable exploration views.

Education

M.S., Computer Science University of Memphis, Memphis, TN

May 2025

B.E., Electronics & Instrumentation
